

Award for best probe: also a tradition of Furuno in the National Marine Electronics Association(NMEA).

What differentiates this probe is the presence of 3 beams that transmit simultaneously to make the composition of a 3D image of the background and the shoals through which your vessel passes, by a fraction of the price of a multi-beam search probe.

Instead of seeing the bottom and fish as a moving frame with the bottom and fish just under your vessel, have the vision also to the sides, idea of rock formation and choose the best place to throw your line. More information in this [link](#) and this [link](#) .
